

BRAVE NEW WORLD - WHAT WE CAN EXPECT TECHNOLOGICALLY IN THE COMING DECADES OF THE 21ST CENTURY

This talk is a postulation of how future technological evolution/revolution will impact all aspects of society in the remaining decades of the 21st century, but especially in entertainment, education, and experience design. The term "paradigm shift" has in the past been ill-advisedly applied and overused. This talk however seeks to identify those technological revolutions that will indeed qualify as paradigm shifts - some of which are most definitely on the near horizon.
